RE: LEED INFORMATION

Dear Customer:

Encore Wire Corporation is an environmentally conscious company that believes in using recycled products in the manufacturing process. All our products are made 100% in the USA at our sole manufacturing location in McKinney, Texas. Encore's products regularly qualify contractors for LEED incentives.

Pre-consumer and post-consumer raw materials normally used in the construction of insulated building wire are Copper, Polyvinyl Chloride (PVC), and Nylon.

Our Copper is approximately 20% post-consumer recycled copper. Our insulated and jacketed products contain approximately 10% post-consumer recycled PVC.

The amount varies slightly depending on availability and product type, but will average what is given above. For any further information about our recycling program, please feel free to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Troy Skidmore", with a long horizontal line extending to the left.

Troy Skidmore
